Note: SLPI compilation methodology closely follows the methodology employed in compiling the Legatum Prosperity Index, which is a global indicator to assess countries' economic and social wellbeing. Accordingly, the index values are compiled by normalising each and every variable with respect to its best and worst values recorded during the last 15 years. Therefore, a new set of numbers are released every year for SLPI and its sub indices.

The highest and the lowest values that can be taken by a normalised variable are 1 and 0, respectively. Thereby, the index values are also ranged between 0 and 1. Thus, higher the index value, its performance overtime and across provinces are comparatively high and vice versa.
